Professional Summary

Full-stack Software Engineer experienced in business-critical web, mobile, and API-driven platforms where reliability, correctness, security, and data consistency matter. Skilled in TypeScript, Node.js, NestJS, Ruby on Rails, GraphQL, REST APIs, PostgreSQL, MySQL, MongoDB, and Firebase. Background in backend architecture, customer-facing APIs, CI/CD, testing, regression prevention, legacy refactoring, and fast-paced startup delivery.

Technical Skills

Backend: TypeScript, Node.js, NestJS, Go, Ruby on Rails, PHP, GraphQL, REST APIs

Databases: PostgreSQL, MySQL, MongoDB, Firebase

Frontend & Mobile: Vue, AngularJS, React Native, Quasar, Electron, JavaScript

DevOps & Cloud: Docker, CI/CD, AWS, Azure, Git

Testing & Quality: Cypress, Unit/Integration/E2E Testing, PR Reviews, Code Reviews

Practices: Clean Code, SOLID, DRY, OOP, Agile, Scrum, Microservices

AI & Developer Tools: AI-Assisted Development, Agentic Coding, LLM Integration, Prompt Engineering, Codex, Claude, Cursor

Languages: Portuguese, English

Professional Experience

[Minha Visita](#) — Full-stack Software Engineer

Novo Hamburgo, RS, Brazil — Hybrid | Startup environment

November 2024 – Present

- Work in an early-stage startup with rapid shipping cycles, direct founder collaboration, and high ownership over problem discovery, solution research, technical decisions, and implementation.
- Build and maintain customer-facing, business-critical APIs for external team management workflows using NestJS, PHP, GraphQL, Firebase, MySQL, and PostgreSQL.
- Led a backend architecture refactor improving maintainability, endpoint consistency, security, and regression risk across critical workflows.
- Improved GraphQL `ResolveField` performance with request caching and microtask-based batching, reducing average query latency by approximately 85%.

- Created a Vitest-based E2E suite for critical API behaviors and migrated all unit tests from Jest to Vitest, reducing CI pipeline time by approximately 59%.
- Built an API integration solution for customers to connect the platform with automation tools such as Make and Zapier.
- Created internal docs and technical presentations on refactors, engineering patterns, architecture changes, and new technologies applicable to the product.
- Helped define sprint and branch workflows; contributed to CI/CD, container-based development, PR reviews, code reviews, and Agile/Scrum processes.

Scopi — Full-stack Software Engineer

Taquara, RS, Brazil — Hybrid | Startup environment

January 2022 – November 2024

- Worked in a startup with fast delivery cycles, close founder collaboration, and autonomy to investigate requirements, research solutions, and implement features end to end.
- Contributed to a business-critical strategic planning platform for company goals, indicators, projects, and operational execution.
- Built web, mobile, and backend features using AngularJS, Firebase, React Native, Ruby on Rails, Node.js, MongoDB, and SQL databases.
- Played a key role in a new public API version, implementing more than half of its hundreds of endpoints.
- Independently refactored a large frontend codebase with ESLint and the Airbnb Style Guide, improving consistency, readability, and maintainability.
- Participated in E2E testing, PR reviews, code reviews, container-based development, Agile ceremonies, and Scrum workflows.

Projects

Ozio Piscinas

Freelance website developed with Next.js for a swimming pool company. Responsible for full implementation, performance optimization, and deployment.

Live: oziopiscinas.com.br

DB Data Migrator

Cross-database migration desktop app built with Go 1.26, Vue 3, and Wails for MySQL and PostgreSQL, featuring schema introspection, intelligent table/column mapping, data validation, and real-time migration monitoring.

Repository: [db-migrator](https://github.com/brunofranca/db-migrator)

Education

Unisinos — Technologist in Internet Systems

São Leopoldo, RS, Brazil — Remote

August 2022 – Expected 2026

- Currently in the fifth semester, expected graduation in 2026.
- Maintains an average above 90%; studied networks, information security, software management, and software planning.

ETEC Monteiro Lobato — Integrated Technical Course in Informatics

Taquara, RS, Brazil

March 2018 – December 2020

- Built a foundation in programming, logic, web development, system maintenance, and hardware troubleshooting.
-

Additional Experience

Freelance Developer

2022 – Present

- Develop websites and platforms for freelance clients using WordPress and modern web technologies.
-

Languages

- Portuguese: Native or fluent
- English: Advanced — EF SET certificate
